

Title: Can't Mount NTFS drive Date: 2016-2-11 1:57 Modified: 2016-2-11 1:57 Category: Tags: ntfs, linux Authors: procamora Slug: can't-mount-ntfs-drive Summary: Status: draft

<http://askubuntu.com/questions/462381/cant-mount-ntfs-drive-the-disk-contains-an-unclean-file-system>

Error mounting /dev/sdf1 at /media/root/Users: Command-line `mount -t "ntfs" -o "uhelper=udisks2,nodev,nosuid" /dev/sdf1 /media/root/Users` failed: Failed to read NTFS \$Bitmap: Error de entrada/salida
NTFS is either inconsistent, or there is a hardware fault, or it's a SoftRAID/FakeRAID hardware. In the first case run chkdsk /f on Windows then reboot into Windows twice. The usage of the /f parameter is very important! If the device is a SoftRAID/FakeRAID then first activate it and mount a different device under the /dev/mapper/ directory, (e.g. /dev/mapper/nvidia_eahaabcc1). Please see the 'dmraid' documentation for more details.
